World PI Week 2021

Together, bringing about change for primary immunodeficiency patients worldwide

CAMPAIGN REPORT
About World PI Week
A global awareness-raising effort

Mission
World PI Week (22-29 April) is a global movement to raise awareness of Primary Immunodeficiency (PI) and related challenges; promote quality of life for people with PI, early diagnosis, availability and access to treatment and care worldwide; and stimulate communication and advocacy around PI.

Aims
World PI Week offers an opportunity to inform and educate health policy-makers, schools and families, and the general public about primary immunodeficiencies (PI) to drive the earliest possible diagnosis and optimal treatment.

Vision
Over 10 million people live with PI around the globe, and yet the condition is still widely unknown. Greater awareness, testing, diagnosis and improved access to treatment are needed.

The Week acts as a central platform to drive awareness as well as global and national advocacy.

Since its inception, World PI Week has been successful in stimulating awareness and advocacy efforts in all continents.
World PI Week by the numbers

- Over 80 countries across the globe
- Thousands of people reached
- Hundreds of events every year
- 11 years of campaigning
- 13 committed organisations driving the campaign
- 8 days to create momentum on PIDs

WORLD PI WEEK 2021 IN ACTION
Focus on what matters most to the community

Spotlight on three main themes that are all the more relevant in the COVID-19 context:

1. **PATIENT SAFETY & PROTECTION**
   - By protecting each other with vaccination, we protect people with primary immunodeficiency

2. **QUALITY OF LIFE & HEALTH OUTCOMES**
   - Research, early diagnosis and better access to treatment help improve patients’ quality of life

3. **PLASMA AVAILABILITY**
   - Ensuring the availability of plasma is essential to produce life-saving therapies for many patients

Together, making a difference in the lives of the millions living with PID worldwide, by stimulating early diagnosis and access to care

Learn more about the 2021 campaign messages
Thousands showing support towards the PID cause worldwide

World PI Week is for everyone

Through virtual runs, online webinars and workshops, social media campaigns, TV/radio interviews; by donating blood or plasma
Launching the campaign together

Opening webinar

- Video message from the World Health Organisation (Dr Ruediger Krech)
- The immune system, PIDs & COVID-19 learnings (Prof Fabio Candotti, Lausanne University Hospital, European Society for Immunodeficiencies - ESID)
- Patients’ experiences during COVID-19 (Julia Nordin, International Patient Organisation for Primary Immunodeficiencies – IPOPI)
- Overview of new campaign initiatives and how to mark the Week

Webinar recordings available on YouTube
Communications « package »

From the ‘essentials’...

Pledge card, e-banners, posters, email signatures, sample website posts, press release & many more

Available in various languages
A series of new campaign teaser videos...

3 video clips providing insights on:

- availability of plasma and plasma-derived medicinal therapies
- changes in quality of life of patients before and after treatment
- mental health impacts that can arise following a PI diagnosis and emotional aspects of living with a PID
- the importance of protecting those who are immune compromised and the role of vaccination

Featuring patients and parents of children with PID from all over the world and all walks of life; as well as PID specialists and policymakers

Available on YouTube and social media
... amplified on social media to spread the word

WORLD PI WEEK TALKS

22-29 April
About the World PI Week Talks

Health journalist Sue Saville talks PID with multiple experts and patients

> What is plasma? Why is it so important for many people with rare diseases like PID?
> What are the challenges around plasma availability and how to address these? What is the impact of COVID-19 on plasma supplies?
> Why donating plasma and how?

> Discussing routine immunization, the role of vaccination in the case of PID patients, vaccines awareness and innovation in the field.

> Being diagnosed with a chronic disease like PID and coping with it in daily life can be challenging.
> Everyone’s situation is unique and there is no single way of dealing with emotions. Seeking help or an attentive hear is very important.

PRESS RELEASE

Embargoed until 23/04/2020, 9.00am CEST

World Pi Week 2021: Will you be striking a “Y” to support the primary immunodeficiency cause?

Brussels, 22 April 2021 – Millions of people around the world are living with a compromised immune system due to a genetic defect. Together, we can make a difference in their lives by stimulating early diagnosis and access to care. This is the headline message of the 2021 World Primary Immunodeficiency (Pi) Week campaign, starting today.

Focus on what matters most to the community

This year, World Pi Week (22-29 April) embraces three themes that are all the more relevant in the COVID-19 context: patient safety and protection with a focus on vaccination; plasma availability; and quality of life.

There are more than 450 different types of primary immunodeficiencies (PiDs), affecting over 6 million people worldwide. Primary immunodeficiencies occur when a person’s immune system is absent or does not function properly, which leaves individuals more prone than other people to infections and predispose them to autoimmunity, allergy, malignancy, or inflammation. For this very reason, raising awareness of the defects of the immune system such as PiDs takes on an even greater significance amidst COVID-19.

While across the world all eyes are on the COVID-19 vaccination progress, World Pi 2021 aims to remind that by protecting each other with vaccinations, we protect people with a compromised or weak immune system, such as those living with PiDs — also, during routine immunization. Further, although the availability of plasma is essential to produce life-saving therapies for many patients, the pandemic has impacted supplies in many parts of the world. This is a reminder that during COVID-19 and beyond, plasma donation is vital.

The spirit of this global endeavour is all about collaboration, awareness, investment and action to ensure that research, early diagnosis and better access to treatment are given greater visibility and feature high on health policy agendas, in order to improve patients’ quality of life.

Striking a “Y” together to drive momentum, mobilise and bring about change

In solidarity with those living with primary immunodeficiency, thousands of people from all continents will connect digitally and show their support towards the PiD cause, through virtual runs, online webinars and workshops, social media campaigns and TV/radio interviews; or by donating blood or plasma.

World Pi Week is for everyone. Join the many patients, policymakers, healthcare professionals including immunologists and nurses, researchers, journalists, company representatives and other partners that come together on 22-29 April to shine the light on what living with a PiD means, and how to deliver change.

Joining World Pi Week 2021 means helping make a difference, in support of patients and their families around the world.

Photo contest #PictureAwareness

Striking a “Y” on all continents to support the PID cause

- Participation on social media to mobilise and drive attention
- Going “green” in reference to the campaign’s key colour but also the importance of outdoor environments for good health

JOIN THE WORLD PI WEEK PHOTO CONTEST 2021
Strike a Y in support of the PID cause – in GREEN!

Share your picture on Facebook, Twitter or Instagram with #PictureAwareness

The Y pose refers to the shape of an antibody, but it also symbolises the community – just like the World PI Week logo. Green is one of the main identity colours of the campaign.
... and the winner is...

Congratulations to UMAE Hospital De Pediatria CMN in Guadalajara (Mexico)!
