

## Dr Nguyen Van Anh

Dr Nguyen Van Anh graduated from Hanoi Medical University in 2007 in Vietnam. She completed her medical residency at the National Children's Hospital in 2011 and then started working in Allergy – Immunology department and finished her thesis in X-linked agammaglobulinemia in 2019.

Although Primary immunodeficiency disease in Vietnam has only been known for about 15 years. However, with efforts to learn from professors and colleagues around the world, she and Vietnamese doctors have diagnosed more than 400 patients with primary immunodeficiency. Besides, she always stands beside patients, understanding the difficulties and medical care needs as well as sharing the joy of patients when their disease is well controlled.

She is very grateful and hopes that Vietnamese patients will continue to receive support from friends around the world so they can be confident and healthy.
